Overview

Zoom is a video conferencing tool used for online meetings, webinars, and virtual collaboration. This document provides instructions for installing, setting up, and using the Zoom Desktop Client on supported operating systems.

Prerequisites

Before installation, ensure the following:

- You have access to a reliable internet connection
- You have administrator rights on your device
- Your operating system is compatible

System Requirements

Table 1. System Requirements

Component	Requirement
Processor	2.0
Ram	4GB
OS	Windows

Install Zoom Desktop Client

1. Open your browser and go to zoom.us/download.
2. Locate the Zoom Desktop Client section and click Download.

Note: This saves the installer file to your device.

3. Run the Installer:
 - On Windows: Double-click [ZoomInstaller.exe](#).
 - On macOS: Double-click [Zoom.pkg](#).
4. Follow the Setup Wizard.
5. Accept the license terms.

6. Choose your installation directory to add the program files.
7. Click **Install** and wait for setup to complete.
8. Click **Finish** or **Close** once the installation is complete.
9. Open Zoom from your desktop or Applications folder.

Create Account or Sign In

Launch the Zoom app or visit zoom.us/signup

To create an Account

1. Enter your email, verify your age, and check your inbox for a confirmation email.
2. Click the activation link to proceed.

To Sign-in

Use your Zoom credentials to log in via zoom.us/signin.

Tip: You can also sign in with Google, Facebook, or SSO.
